

CITY OF TIGARD, OREGON

RESOLUTION NO. 05- 42

A RESOLUTION ADOPTING THE CITYWIDE MASTER FEES AND CHARGES SCHEDULE WHICH REPLACES RESOLUTION NO. 04-37 AND ALL SUBSEQUENT AMENDMENTS TO DATE

---

WHEREAS, the City has a Master Fees and Charges Schedule; and

WHEREAS, City staff has reviewed fees and services provided; and

WHEREAS, City staff has proposed several new fees and changes to certain fees to recover costs or due to previously approved annual adjustment formulas; and

WHEREAS, the City's Master Fees and Charges Schedule includes fees set by other agencies; and

WHEREAS, Tigard Municipal Code (TMC) 3.32.050 requires that the City Council review fees and charges annually.

NOW, THEREFORE, BE IT RESOLVED by the Tigard City Council that:

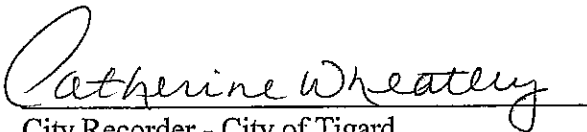

SECTION 1: The fees and charges for the City of Tigard are enumerated in the attached schedule (Exhibit A).

SECTION 2: This resolution is effective July 1, 2005.

PASSED: This 14<sup>th</sup> day of June 2005.

	Commercial/industrial (per employee)	\$255.00	

\*See Appendix for methodology used to calculate the charges.

*Park SDC Annual Adjustment*

4/10/2001

Parks SDC fees shall be adjusted annually on January 1st of each year beginning in 2002. The new fee will be determined by multiplying the existing fees by the average of two indices, one reflecting changes in development/construction costs and one reflecting changes in land acquisition costs. The average of these two indices is a reasonable approach because the Parks SDC fee is roughly split 50% between land acquisition and land development components.

The index for the Land Acquisition component will be the base cost for residential tract land in Tigard, as determined by the Washington County Appraiser. The average cost for residential tract land was selected because it is readily identified and is the lowest priced of the buildable lands in Tigard. Changes in this base cost can be calculated in terms of a percentage increase, to create the level of change to the original index, and projected to the overall acquisition cost. In accordance with Measure 5, the Washington County Appraiser's office will determine appraised values on July 1 of each year.

The index for the Land Development component of the Parks SDC will be the Construction Cost Index for the City of Seattle as published in the December issue of the Engineering News Record (ENR). The Seattle cost index will be used because the city is the geographically closest to Tigard of twenty metropolitan areas for which the ENR maintains cost data. This index is adjusted monthly, quarterly, and annually. The annual index for each year will be selected beginning with the index for December 2002. The annual index will be used because it is available in December and most closely coincides with the January 1st implementation of Park SDC fee adjustments.

**City of Tigard  
Fees and Charges Schedule**

EXHIBIT A

Department	Revenue Source	Fee or Charge	Effective Date
------------	----------------	---------------	----------------

*Park SDC Annual Adjustment (cont.)*

Calculation Definitions:

SDC (2000) = Current SDC fee

L (2000) = Average cost of residential tract land 2000

L (2001) = Average cost of residential tract land 2001

L (2xxx) = Average cost of residential tract land 2xxx

C (2000) = Construction cost index of 2000

C (2001) = Construction cost index of 2001

C (2xxx) = Construction cost index of 2xxx

LCI = Land Cost Index: change from the current year from previous year

CCI = Construction Cost Index: change from the current year from previous year

ACI = Average cost index change of LCI + CCI

Formula:

$L (2001) / L (2000) = LCI$

and

$C (2001) / C (2000) = CCI$

therefore

$LCI + CCI / 2 = ACI$

then

$SDC (2001) \times ACI = SDC (2002)$

Each year subsequent to 2002, the costs shall be revised using the current year and previous year's data. Notwithstanding the foregoing, all calculations shall be carried out to the thousandth place. A final product ending in .49 or less shall be rounded down to the nearest dollar, .50 or more up to the next dollar. Community Development staff will perform the adjustment calculation and prepare the resolution each year.

# APPENDIX

- Methodology to Calculate Park SDC
- Methodology to Calculate Traffic Impact Fee
- Methodology to Calculate Water SDC

## METHODOLOGY TO CALCULATE PARK SDC<sup>i</sup>

The Park System Development Charge (SDC) is assessed to new developments for the acquisition and development of parks, greenways, and paved trails. The SDC is a one-time fee charged to new development to help pay a portion of the costs associated with building additional parks and trails to meet the needs created by growth. The SDC revenues can only be used on capacity-increasing capital improvements and cannot be used to repair any existing park deficiencies.

The City relies on level of service (LOS) standards to determine current needs, current surpluses or deficiencies, and future needs. The LOS standards are expressed in terms of number of park acres per 1,000 persons. The "ideal goal" for Tigard is 11.0 acres per 1,000 persons, but this is only a goal and was not adopted as a set LOS by Tigard Council. The LOS standards used to calculate facility needs are based on the City and Urban Services Area's existing park inventory. The LOS standards are then applied to projected population and employment growth to determine future facility needs for the City and Urban Services Area. SDC funded requirements are calculated based on the estimate unit cost applied to the needed facilities.

Don Ganer & Associates completed an analysis of the City's current park inventory and population. Then they used a multitude of factors and costs to determine cost per capita by resident and employee for future park costs.

The first step was to project the population and employment with the City of Tigard and the adjacent urban services planning area for 2008. Data was used from Metro and the Population Research Center at Portland State University. It was projected that population would increase by 5,268 and employment by 3,134. These projections plus the average daily availability of park facilities for residents and employees was used to create a demand ratio. While park facilities benefit both residents and employees, the amount of time these facilities are available for use by employees is not the same as residents; an employee does not create demands for facilities equal to those created by a resident. The demand ratio will be used to determine how much of future facility costs can be contributed to residential and non-residential growth.

Next a summary of facility needs through the year 2008 was produced, both for growth and to repair park deficiencies for current residents and employees. The "Current Need" is the proportionate share needed to provide facilities to current residents and employees at the levels of service planned for the year 2008. The "Growth Need" is the proportionate share needed to provide facilities to future residents and employees at the planned levels of service for 2008.

### FACILITY NEEDS FOR POPULATION AND EMPLOYMENT GROWTH AND DEFICIENCY REPAIR

Facility Type	Planned LOS (Units/1,000)	Current Inventory	Current Need	Surplus or (Deficiency)	2008 Need	Growth Need
Neighborhood Parks (acres)	0.68	19.06	36.21	(17.15)	39.80	3.59
Community Parks (acres)	1.81	102.87	112.03	(9.16)	122.87	10.84
Greenways (acres)	3.25	173.00	201.05	(28.06)	220.50	19.44
Linear Parks (acres)	.081	52.22	50.14	2.08	55.00	2.78
Total Acres	6.55	347.15	399.43	(52.29)	438.17	36.65
Trails (miles)	0.19	8.00	11.95	(3.95)	13.11	1.16

There are deficiencies in the number of acres of Neighborhood Parks, Community Parks, and greenways; and in the miles of trails available to serve current residents and employees. SDC Improvement fee revenues must be used only for growth needs, and may not be used to remedy deficiencies. Alternative non-SDC revenues must be used to repair deficiencies.

The SDC Parks Capacity Improvements Program identifies new facilities needed to serve parks and recreation needs through year 2008. The "Residential and Non-Residential Growth-Required New Facility Costs" table shows the breakout of residential and non-residential share of costs for these new facilities. As stated earlier, non-residents do not receive the same benefit from parks as residents. It has been calculated that the residential share of growth costs is 88.1% of the total of those facilities that benefit both residential and non-residential development (i.e., community parks, linear parks, etc.) and 100% for those facilities that benefit residential development only (e.g., neighborhood parks).

### RESIDENTIAL AND NON-RESIDENTIAL GROWTH-REQUIRED NEW FACILITY COSTS

Facility	Cost Per Unit	Total New Facility Costs	New Facility Growth Costs	Residential Growth Costs	Non-Residential Growth Costs
Neighborhood Parks (acres)	\$410,000	\$8,503,400	\$1,472,310	\$1,472,310	\$0
Community Parks (acres)	440,000	8,800,000	4,769,600	4,202,018	567,582
Greenways (acres)	130,000	6,175,000	2,527,200	2,226,463	300,737
Linear Parks (acres)	230,000	639,400	639,400	563,311	76,089
Trails (miles)	520,000	2,657,200	603,200	531,419	71,781
Totals		\$26,775,000	\$10,011,710	\$8,995,521	\$1,016,189

In addition to facility costs, the City incurs costs in the development and administration of the SDCs and may recoup a portion of those costs in accordance with ORS 223.307(5). Total compliance/administrative costs have been estimated to be \$165,000 and include a master plan update, annual management, and SDC methodology review. These costs are allocated between residential and non-residential growth share. The residential portion is \$148,252 and the non-residential portion is \$16,782.

### NET RESIDENTIAL AND NON-RESIDENTIAL SDC-ELIGIBLE COSTS

	Residential SDC Eligible Costs	Non-Residential SDC Eligible Costs
Growth-Required Facilities	\$8,995,521	\$1,016,189
+ Compliance/Administrative Costs	148,252	\$16,782
= Total Growth-Required Costs	\$9,143,774	\$1,032,936

The SDC-Eligible costs along with anticipated population increase are used to calculate the SDC Improvement Fee. For the residential improvement fee, the total growth-required costs is divided by the population increase to obtain a per capita cost ( $\$9,143,774/5,268 = \$1,736$ ). This per capita cost is then multiplied by the average number of persons per dwelling unit type. The number of persons per dwelling unit was calculated using the official U.S. Census data gathered in Tigard in 2000. Then, a tax credit is calculated based on the assumption that debt instruments will likely be used as a future source for funding capacity improvements. A portion of funds to repay these debts may come from property taxes paid by growth and the tax credit accounts for potential payments in order to avoid charging growth twice. The table below shows the residential SDC calculations.

Type of Dwelling Unit	Average Persons Per Dwelling Unit	X	Total Residential Cost Per Capita	=	Residential Improvements Cost Per Dwelling Unit	-	Tax Credit Per Dwelling Unit	=	Residential SDC Per Dwelling Unit
Single-Family:	2.67		\$1,736		\$4,634		\$881		\$3,753
Multi-Family:	1.86		\$1,736		\$3,228		\$211		\$3,017
Manufactured Housing:	1.81		\$1,736		\$3,142		\$166		\$2,976

A similar process is used to calculate the non-residential SDC improvement fee per employee. The table below shows the non-residential SDC calculations.

Net Non-Residential SDC Eligible Costs	÷	Employment Increase	=	Non-Residential Improvements Cost Per Employee	-	Tax Credit Per Employee	=	Non-Residential SDC Per Employee
\$1,032,936		3,134		\$330		\$75		\$255

## METHODOLOGY TO CALCULATE TRAFFIC IMPACT FEE

The countywide Traffic Impact Fee (TIF) is assessed to new development for the development's projected impact on the transportation system. Developing properties will be required to pay based on the number of trips they are projected to generate (fee per trip basis). TIF revenue will be used to fund off-site highway and transit capital improvements, which provide additional capacity to the major transportation system. The TIF does not fund existing needs such as minor reconstruction or maintenance projects.

The first step in calculating the TIF for a developing project is to determine the most appropriate Land Use Category. The categories are Residential Use, Business & Commercial Use, Office Use, Industrial Use and Institutional Use. Once the land use category has been determined, the values needed for the calculation are looked up on a table provided by Washington County. The table contains the land use category, basis for trip determination (units), weekday average trip rate and weekend average trip rate.

The TIF is calculated using the following formula:

$$\text{Weekday Average Trips} \times \text{Units} \times \text{Trip Rate} = \text{TIF}$$

Where

Weekday Average Trips is a value representing an average of the number of trips per unit for each land use type. This value is set by the County TIF ordinance for most land uses. This value is listed in the table provided by Washington County.

Units value is determined by the developing project's size. The type of units is set for each land use in the table and is typically expressed as Thousand Gross Square Feet (TGSF), number of units (for apartments, condos, etc), number of employees, etc.

Trip rate value is set by the TIF Ordinance and may be adjusted on a yearly basis. The current rates that were adjusted on July 1, 2005 are:

Residential Use	\$285.00 per average weekday trip
Business and Commercial Use	\$72.00 per average weekday trip
Office Use	\$262.00 per average weekday trip
Industrial Use	\$274.00 per average weekday trip
Institutional Use	\$118.00 per weighted average daily trip
Transit Rate	\$21.00

For Example:

A 20,400 square foot office building's TIF would be calculated as follows:

$$20,400 \text{ (TGSF)} \times 16.31 \text{ (Weekday Average trips)} \times 262.00 = \$87,174 \text{ Total TIF}$$

Then

To determine the Mass Transit portion of the TIF

$$20,400 \times 16.31 = 333 \text{ (Trip Generation)}$$

Then

Trip Generation x Transit Rate = Transit Amount

$$333 \times 21 = \$6,993$$

Then

Total TIF – Transit Amount = Road Amount

$$\$87,174 - \$6,993 = \$80,181$$

This is how a basic TIF is calculated. TIF calculations can become more complex as other factors are included in the calculation. Those factors could be credits and offsets, weighted averages or uses not listed in the table provided by Washington County Ordinance.

## METHODOLOGY TO CALCULATE WATER SDC<sup>ii</sup>

The Water System Development Charge (SDC) is comprised of a reimbursement fee and improvement fee. The reimbursement fee is intended to recover the costs associated with the growth-related (or available) capacity in the existing system, and the improvement fee is based on the costs of capacity-increasing future improvements needed to meet the demands of growth.

### Reimbursement Fee:

The general methodology used to develop the reimbursement fee includes the following four steps:

1. Determine the value of growth-related capacity<sup>iii</sup>
2. Define system capacity
3. Calculate the unit cost of growth – related capacity
4. Develop reimbursement fee per EDU (Estimated Dwelling Unit)

In 2000, the City of Tigard hired CH2M Hill to complete a System Development Charge Update for the Tigard water system. The firm performed an extensive analysis and calculated the following information:

<u>Meter Size</u>	<u>Meter Equivalent Factor</u>
5/8 – 3/4 inch	1
1 inch	2.5
1 ½ inch	3.6
2 inch	8
3 inch	15
4 inch	25
6 inch	50
8 inch	80
10 inch	140
12 inch	380

Net investment per gallons per day (gpd) = \$0.87

Maximum Day Water Demand (gpd) (c) = 645

This data is used to calculate the reimbursement portion of the SDC. The calculation is:

Net investment per gpd (0.87) x Maximum Day Water Demand (645) = Reimbursement SDC per EDU

Current Reimbursement SDC per EDU = \$561.00

Then

Reimbursement SDC per EDU x Meter Equivalent Factor = Reimbursement SDC for each meter size

For Example:

561.00 x 2.5 (meter equivalent for 1 inch meter) = \$1,402.50

#### Improvement Fee:

The general methodology used to develop the improvement fee is similar to that for the reimbursement fee, and includes the following four steps:

1. Determine the costs of growth-related improvements<sup>iv</sup>
2. Calculate the unit cost of additional capacity
3. Calculate debit service credit
4. Develop improvement fee per EDU

CH2M Hill calculated the improvement fees per EDU to be:

Water Supply Improvement Fee = \$880.00

Distribution System Improvement Fee 410 Zone = \$600.00

Distribution System Improvement Fee Bull Mountain = \$1,322.00

These figures are then used to calculate the cost per meter size.

Water Supply Improvement Fee x Meter Equivalent Factor = Water Supply Improvement Fee for each meter size

For Example:

$$880.00 \times 2.5 \text{ (meter equivalent for 1 inch meter)} = \$2,200.00$$

Distribution System Improvement Fee 410 Zone x Meter Equivalent Factor = Water Distribution System Improvement for each 410 Zone meter size

For Example:

$$600.00 \times 2.5 \text{ (meter equivalent for 1 inch meter)} = \$1,500.00$$

Distribution System Improvement Fee Bull Mountain x Meter Equivalent Factor = Water Distribution System Improvement for each Bull Mountain meter size

For Example:

$$1,322.00 \times 2.5 \text{ (meter equivalent for 1 inch meter)} = \$3,305.00$$

Final SDC Charge:

The totals listed above are added together to get the total Water SDC charge per meter size.

Reimbursement SDC for each meter size + Water Supply Improvement Fee for each meter size + Water Distribution System Improvement for each 410 Zone meter size

= Total Water SDC charge per meter size for 410 Zone

For Example:

$$1,402.50 + 2,200.00 + 1,500.00 = \$5,102.50 \text{ rounds to } \$5,103.00$$

Or

Reimbursement SDC for each meter size + Water Supply Improvement Fee for each meter size + Water Distribution System Improvement for each Bull Mountain meter size

= Total Water SDC charge per meter size for Bull Mountain

For Example:

$1,402.50 + 2,200.00 + 3,305.00 = \$6,907.50$  rounds to \$6,908.00
